ANDREI KAZIALETSKI

Senior Software Engineer | Solution Architect | Python / Cloud / Computer Vision

Poland | Remote Europe / B2B | andrey.kozeletsky@gmail.com | +48 516 584 680

iamavk.info | github.com/avkghost | linkedin.com/in/andrei-kazialetski-a2488240

PROFESSIONAL SUMMARY

Senior Software Engineer and Solution Architect specializing in Python backend development, distributed systems, and cloud infrastructure. Hands-on experience with FastAPI, PostgreSQL, Redis, AWS, Kubernetes, and Terraform, from system design and integrations through deployment and optimization. Additional background in computer vision, embedded C/C++, Linux, and iOS development.

CORE SKILLS

Backend: Python, FastAPI, REST APIs, PostgreSQL, Redis, Celery, microservices

Cloud & Architecture: AWS (S3, RDS), Kubernetes, Docker, Terraform, system integration, Keycloak

Computer Vision / Embedded: CNN optimization, TensorFlow Lite Micro, ESP32, 3D reconstruction, C/C++, Linux

Mobile & Other: Swift, SwiftUI, UIKit, Combine, Selenium, Playwright

PROFESSIONAL EXPERIENCE

Solution Architect / Python Developer | **Freelance (NDA)** | Feb 2025 – Present (verify end date)

Designed and implemented a cloud-based project and workforce management platform using Python/FastAPI, Kubernetes, Terraform, and AWS (S3/RDS). Developed service integrations with Keycloak, Stripe, Twilio, and Google APIs. Worked across system architecture, backend implementation, and infrastructure optimization; reported approximately 20% infrastructure cost reduction.

iOS Engineer | **Freelance** | Dec 2024 – Aug 2025 (verify end date)

Developed iOS application features using SwiftUI, Combine, and networking APIs, with emphasis on maintainable implementation and integration.

Software Engineer / Computer Vision & ML | **InData Labs** | Mar 2020 – Oct 2024

Worked on Python-based data acquisition and processing, containerized services, embedded CNN optimization for resource-constrained devices, and computer vision applications. Projects included ESP32/TensorFlow Lite Micro, iOS 3D reconstruction with depth sensors, pose estimation, and speech recognition.

Embedded Software Engineer | **Softeq** | 2019 – 2020

Worked on embedded software development using C/C++.

Senior iOS Engineer | **Digiteum** | 2012 – 2019

Developed iOS software and contributed to mobile application architecture and implementation.

Earlier software engineering roles | 2003 – 2012

FinalView (iOS), EffectiveSoft, and MoveYourWeb (embedded/software engineering). Additional role details available on request.

SELECTED OPEN-SOURCE & INDEPENDENT PROJECTS

FDTester — ATmega2560-based floppy disk controller and diagnostics: github.com/avkghost/FDTester

Iomega Tools — utilities for legacy SCSI storage devices: github.com/avkghost/iomega_tools

BlueSCSI / DaynaPORT — SCSI networking bridge experiments and Linux/Windows driver work: github.com/avkghost
